

Android Setup Instructions

1. Install eclipse by running `sudo apt-get install eclipse`
2. Download Android SDK from <http://developer.android.com/sdk/index.html>
3. Follow SDK installation instructions here:

<http://developer.android.com/sdk/installing/index.html>

During Step 4: choose Android 2.2. Most current devices come with android 2.2, and all new devices coming to Ghana will have at least android 2.2. 2.3 is still new and not widespread yet. Android 3 is intended for tablets, not phones, so don't worry about it for now.

4. Install android eclipse plug in as well (it will be part of the above instructions)
5. Code! Go to <http://developer.android.com/training/index.html> Try finishing the whole Building Your First App Tutorial to get the feel for it. It would be useful to get through the whole tutorial if you have time. We will provide phones for you tomorrow, so for today, make it run in Emulator.
